

Solution Requirements

Date	26 June 2026
Team ID	SWTID-2026-6095
Project Name	EduGenie – AI Powered Educational Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access EduGenie through login or user verification before using personalized features.	High
2	Authorization levels	Students can access learning tools while administrators can manage system settings and content.	Medium
3	External interfaces	System integrates with Gemini AI API and educational resources for generating responses.	High

4	Transactions processing	User questions are processed and converted into answers, quizzes, summaries, or learning roadmaps.	High
5	Reporting	System displays generated quizzes, summaries, learning recommendations, and user progress information.	Medium
6	Business rules, etc.	Responses must be educational, topic-specific, and generated according to the user's learning request.	High
7	Compliance to laws or regulations	User data must be handled securely and privacy standards must be maintained.	Medium
8	<i>Other</i>	System should support question answering, concept explanation, quiz generation, summarization, and learning roadmap creation.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	AI responses should be generated quickly.	Response within 2–3 seconds
2	Scalability	System should support increasing users and requests.	Supports 500+ users
3	Security & Data Privacy	User information and learning data must be protected.	Secure authentication and encrypted data storage
4	Reliability & Availability	System should remain accessible with minimal downtime.	99% uptime
5	Usability & Accessibility	Interface should be simple and easy for students to use.	Easy navigation and responsive design
6	<i>Other</i>	System should be maintainable and portable across devices.	Works on desktop and mobile browsers
